

FLORIDA STATE UNIVERSITY
OFFICE OF RESEARCH

With 18 colleges, 50+ research centers and institutes, and over 2,500 faculty, the Office of Research relies on expert finder systems to know who does what, where they fit in our research strategy, and how we can best support their work.

Strengthening research competitiveness means making connections between opportunities and researchers.

Collaborative Team Building

It's hard to build a team if you don't know all the players. EFS allows us to build a roster of potential collaborators based on common interest in a research topic, and complementary expertise and experience.

Funding Opportunities

The first step to getting funded is finding the right opportunity to apply to, and EFS helps our research development effectively distribute funding opportunities to the most relevant faculty.

Workshop Panel Speakers

Faculty often find it valuable to learn from the experience of peers. EFS is particularly helpful in identifying prior funding success or reviewer experience.

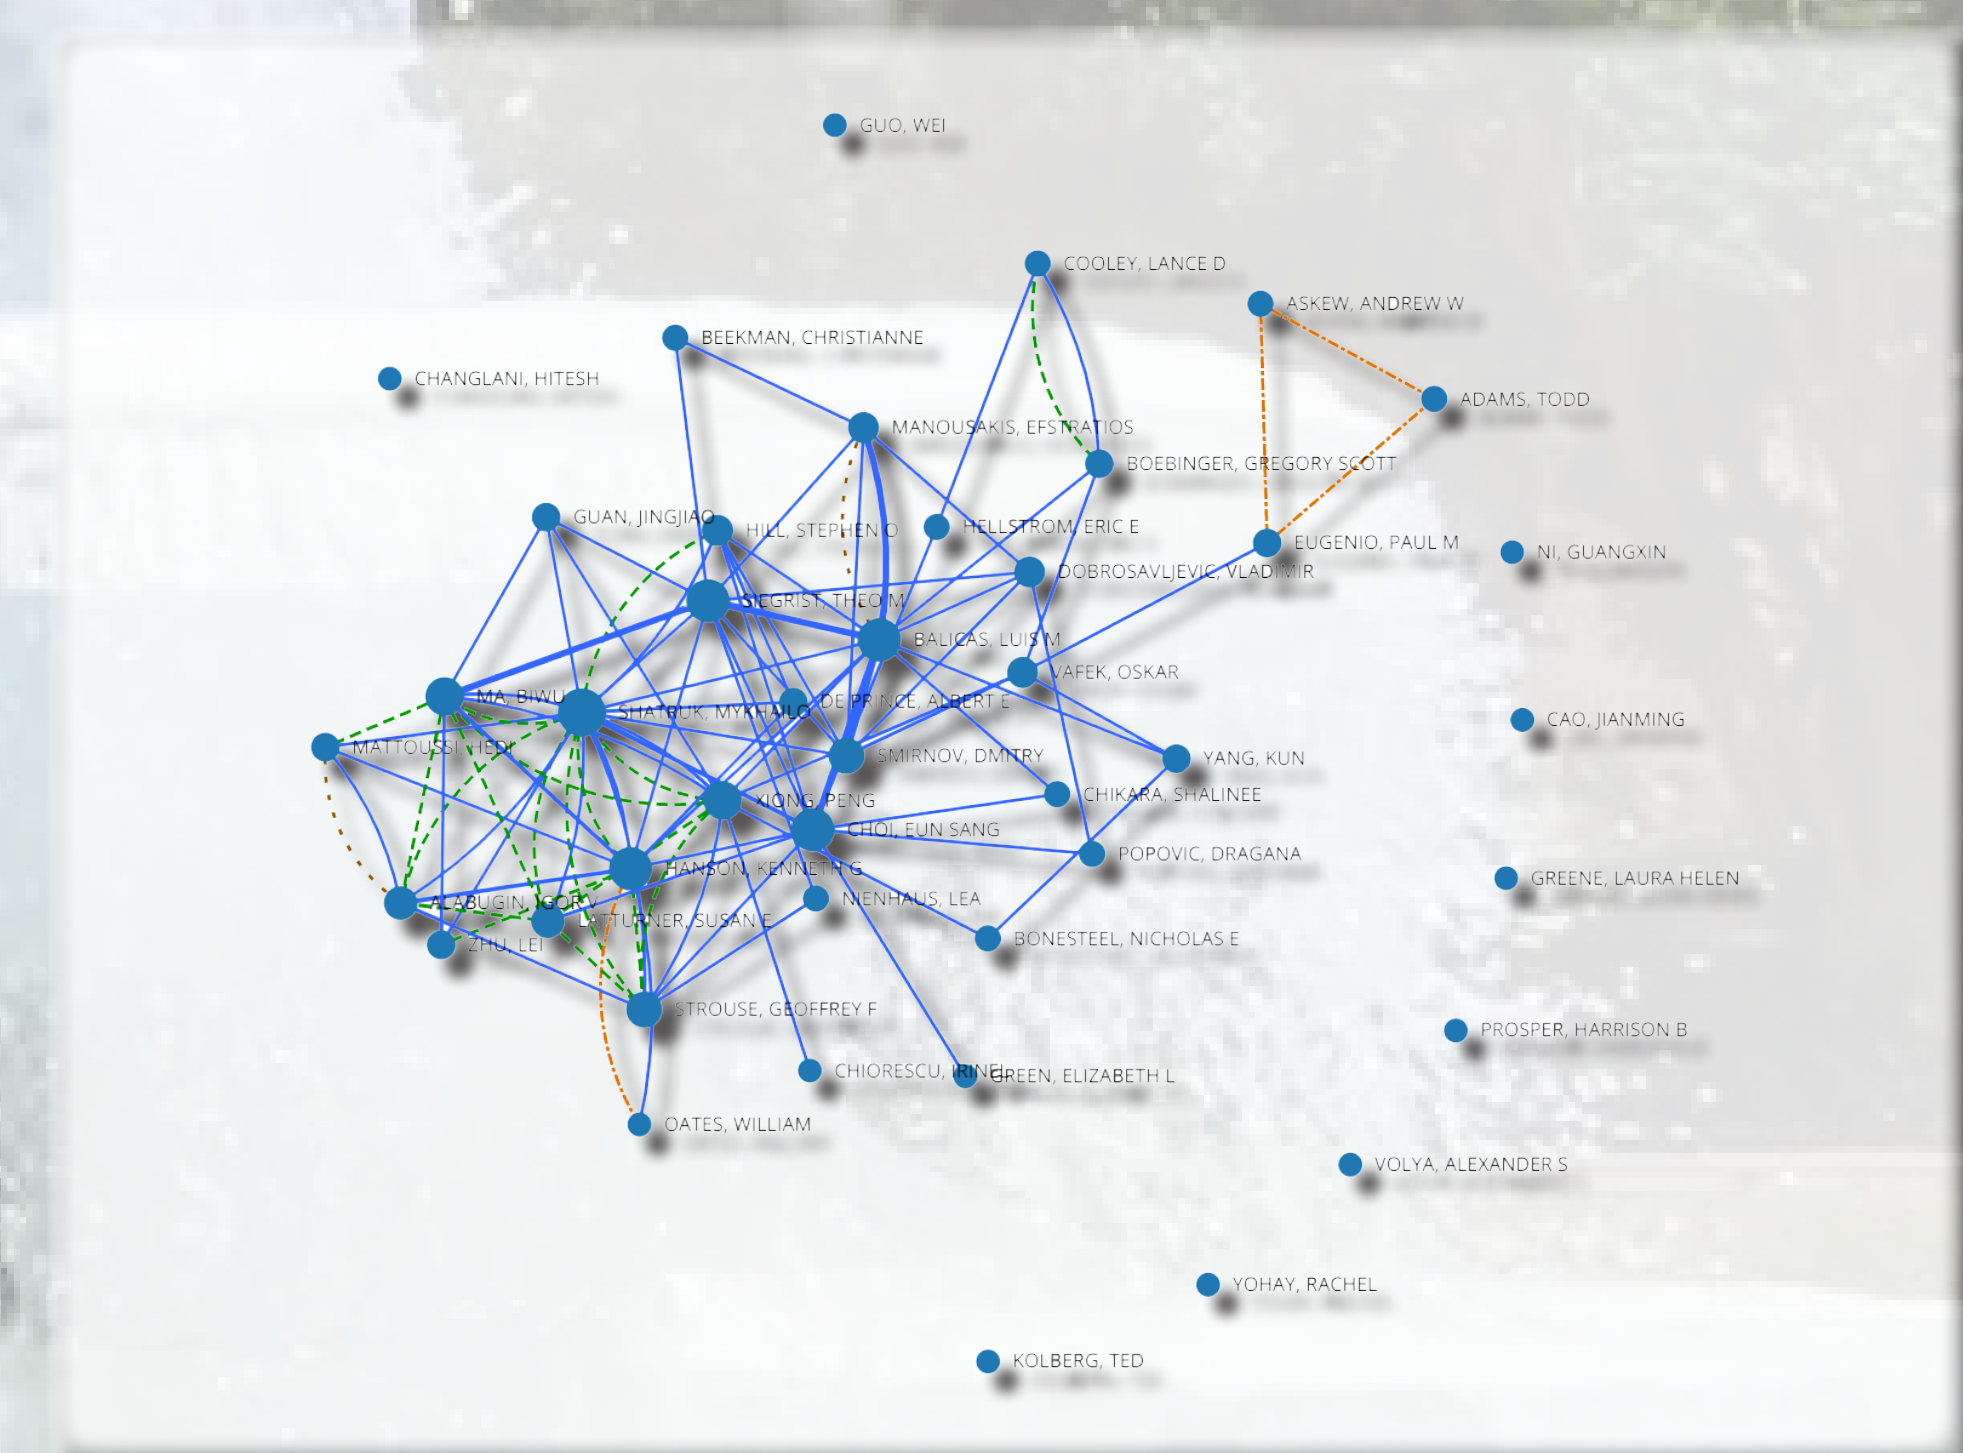

Strategic Communications

Telling our story is critical to building FSU's research reputation, and positioning PIs/teams for funding success. EFS lets us identify candidates for videos, podcasts, featured stories, and more.

VIP Engagement

When a sponsor, donor, or other VIP visits FSU we want to make their experience memorable and valuable. EFS helps our team identify faculty and facilities that are relevant to their interests, and vet their inclusion prior to a visit.

Research Intelligence

Some EFS provide advanced features that are useful for strategic decisionmaking. Particularly valuable are things like collaboration network maps, funding distribution, and other data visualizations.
